

DEVOPS ENGINEER (DA NANG)

YOUR RESPONSIBILITIES WILL INCLUDE

- Management of resources on Azure or AWS cloud computing platforms.
- Management of Gitlab project engineering.
- Building CI/CD processes and managing automated workflows.
- Setting up testing and production environment infrastructure.
- Executing software engineering processes to ensure effective measures are implemented.
- Implementing security strategies to ensure software and process security.
- Source code management.
- Conducting cutting-edge research and practices in DevOps processes.

JOB REQUIREMENTS

As a DEVOPS engineer, we have the following basic requirements:

- Fluent in spoken and written English; knowledge of Chinese is a plus.
- Background in DEV or QA is acceptable, with a preference for candidates with a computer-related degree or some experience in automated testing.
- Prior experience in DevOps is not required but considered a plus. We have professional DevOps engineers who will provide training and guidance.
- Experience with Linux systems is a plus.

OPPORTUNITY

- By becoming a DevOps Engineer at AvePoint, you will have the opportunity to collaborate with the company's most experienced engineering teams, and gain experience in various areas including underlying operating systems, networks, infrastructure construction, cloud-native development, various advanced infrastructure software, and industry best practices.
- In terms of innovation, DevOps Engineers will have ample opportunities to explore cutting-edge technologies, such as automation operations, intelligent operations, GitOps, and more.
- Additionally, you will have the chance to work on a wide range of production lines, gaining first-hand exposure to a multitude of advanced engineering designs and feature developments in AvePoint online services, which will provide you with many opportunities for self-improvement.
